

### BEST PRACTICES-1

a) Title: **FELICITATING ACHIEVERS and ACHIEVERS TALK FOR STUDENT MOTIVATION**

b) **Goal:** To encourage students for greater achievements  
To enable the students to face complex situations

c) **The Context:** In the wake of globalisation and hectic competition the country is moving towards materialistic life. The younger generation have forgotten the sacrifice made by our ancestors and achievers. Hence the students are needed to be well informed about our achievers and well equipped with mental skills and strengths. Therefore, there is a need to be motivating them properly. The practice of felicitating the achievers throws the light on path tread by the achievers and indicates the hazards they have overcome and the efforts they have put into achieve their goals. These factors motivate the students.

d) **The Practice:** The top scorers, including our alumni, in the academics, sports and co-curricular activities are recognised and felicitated.

e) **Evidence of Success:** This practice is appreciated by all. The practice continues to be a tradition of the institution receiving appreciation from one and all. The felicitated student achievers are happy with our deed.

f) **Problems encountered:** The monitory constraints hold us back in felicitating a good number of achievers and restricts us for a limited area and time.

### BEST PRACTICES-2

a) Title: **BLOOD DONATION CAMP**

b) **Goal:** To help people in accidental needs  
To motivate students to play an effective role in social building activities.  
To prepare them in shouldering the social responsibility.

c) **The Context:** These are the days of hectic traffic situations. The number of accidents and health problems are showing an exponential trend. Hence, blood donation camps are the need of the hour.

d) **The Practice:** Blood donation camps are organised regularly with the collaboration of Government Organisations, Non-Government Organisations and Government Health Centres. All safety measures are adopted and possible precautions are taken while collecting and testing of blood samples. The students are pre-notified regarding the event and their negative responses/thoughts are struck down by motivational talks. The entire system is monitored and conducted by lab technicians and doctors. Students are provided nutrition and diet on that day as an incentive.

e) **Evidence of Success:** Every year blood donation camps are conducted by the institution on its own and in some times with the collaboration of other organisations. The students are approached the concerned staff whenever they are in urgent need of blood to their relatives or neighbours in the event of accidents and they are happy that they are involved in the social service. This practice of the institution has created the health and social consciousness among the students.

f) **Problems Encountered:** A good number of students are below the standard norms prescribed for collecting blood.
